

Objectives:

At the end of this episode, I will be able to understand:

1. Data and Intellectual Property are considered assets
2. Data is extremely valuable for organizations
3. Data should be clearly identified for business value
4. Data security classification should be clearly defined
5. Intellectual property types are:
 - Trademark – A sound, color, logo, saying or other distinctive symbol that is closely related with a certain product or company. Some trademarks are eligible for registration
 - Copyright – Protection of any work that is captured in tangible form
 - Patent – Protection of research and ideas that led to the development of a new, unique and useful product to prevent the unauthorized duplication of the patented item.
 - Trade secret – A formula, process, design, practice or other form of secret business information that provides a competitive advantage to the organization that possesses the information
