## **Session 2 Activity Book**

## Activity 2.1: Identify Risk Events

Based on the information you already learned, identify some risk events and threat events that can occur commonly in your industry or area of work. Then, discuss the impacts of your identified risk and threat events as a group.

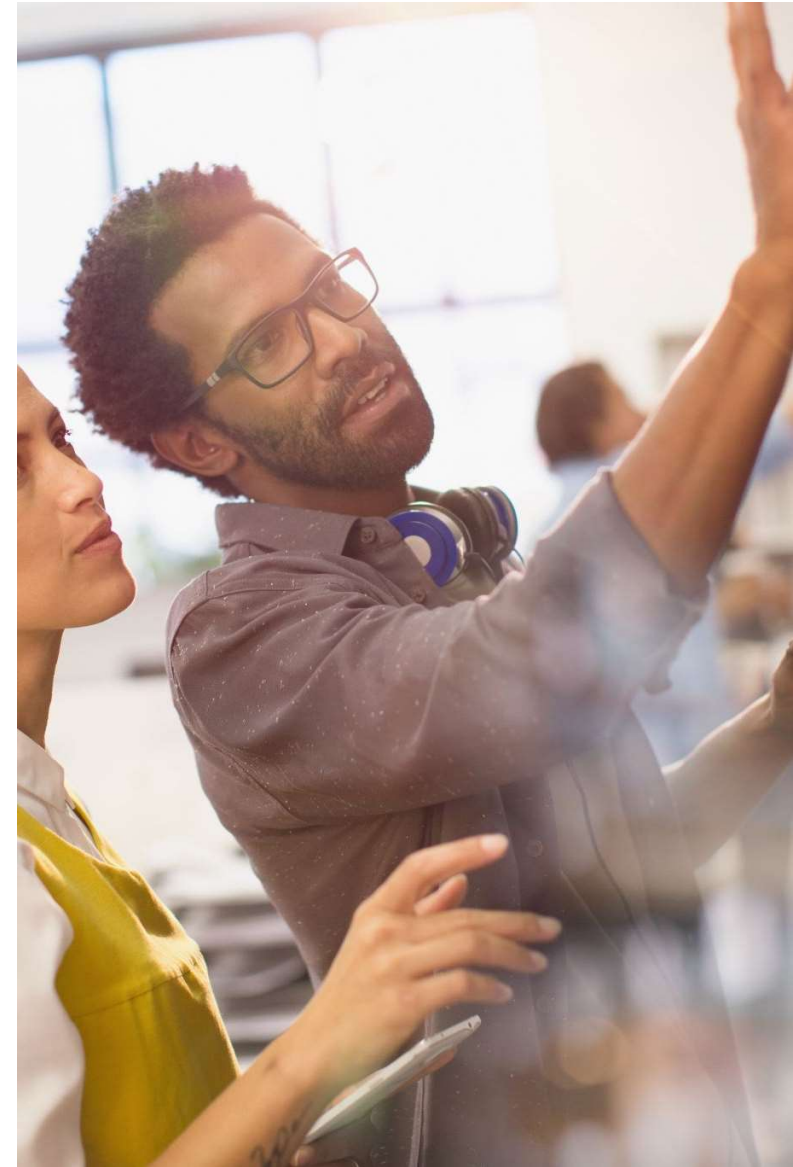

## Activity 2.1 Worksheet

| Risk Event | Threats |
|------------|---------|
|            |         |
|            |         |
|            |         |
|            |         |
|            |         |
|            |         |
|            |         |
|            |         |

## Activity 2.2: Explaining Risk Identification

Identifying risk is only one part of understanding the scope of potential impact. Explaining the process to key stakeholders is critical to get timely and relevant data.

How do you explain the risk identification process? Are there any roadblocks that can disrupt the process? Discuss these questions as a group.

## Activity 2.3: Threat Modeling

You are responsible for modeling threats for a new application that will collect protected healthcare information (PHI) and financial information from its users. The enterprise AppDev team uses an agile methodology to develop applications, while the Information Security team uses a traditional waterfall approach for their projects.

Which modeling technique(s) best apply to this situation? Discuss your answers as a group.

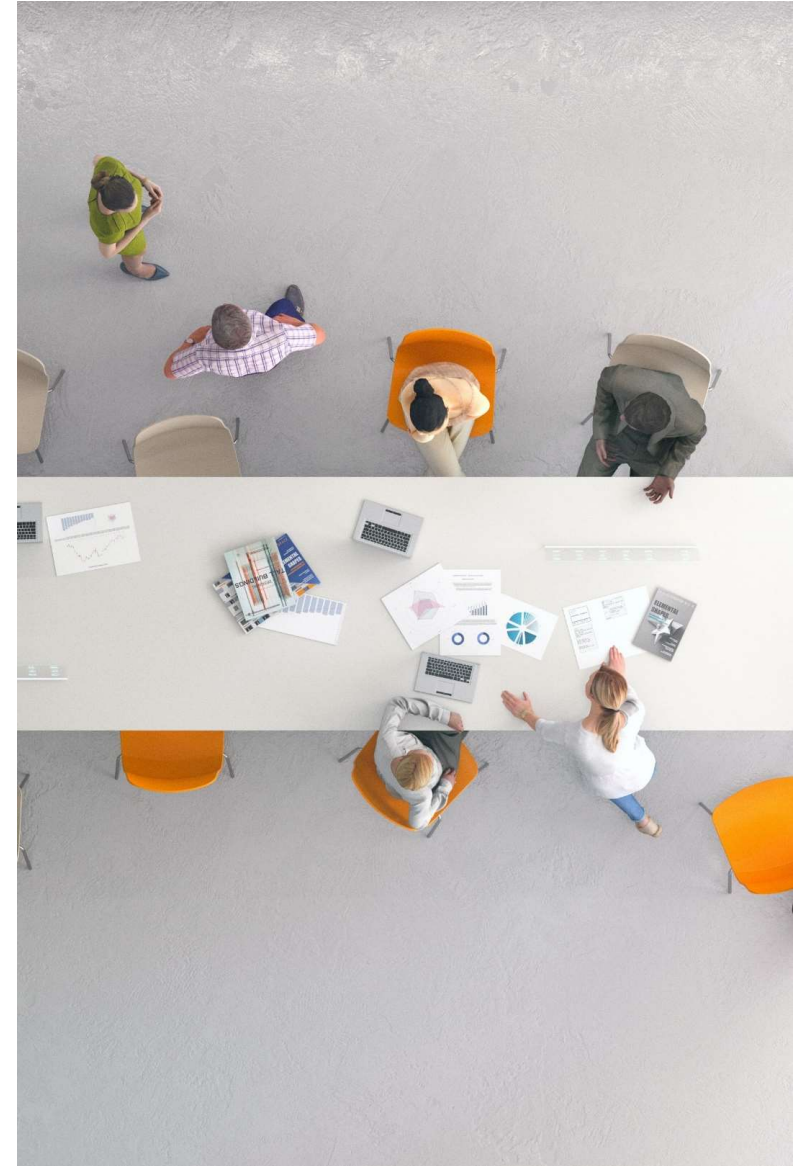

## Activity 2.4: Risk Scenarios

What are the benefits and drawbacks of top-down and bottom-up approaches to developing risk scenarios. Which method do you prefer and why? Discuss the answers as a group.

## Activity 2.5: Applying Frameworks

What are some common frameworks and methods you have used? How do you identify a good fit between your enterprise and methodology? What happens if you need to change things? Discuss your answers as a group.

## Activity 2.6: Identifying Risk States

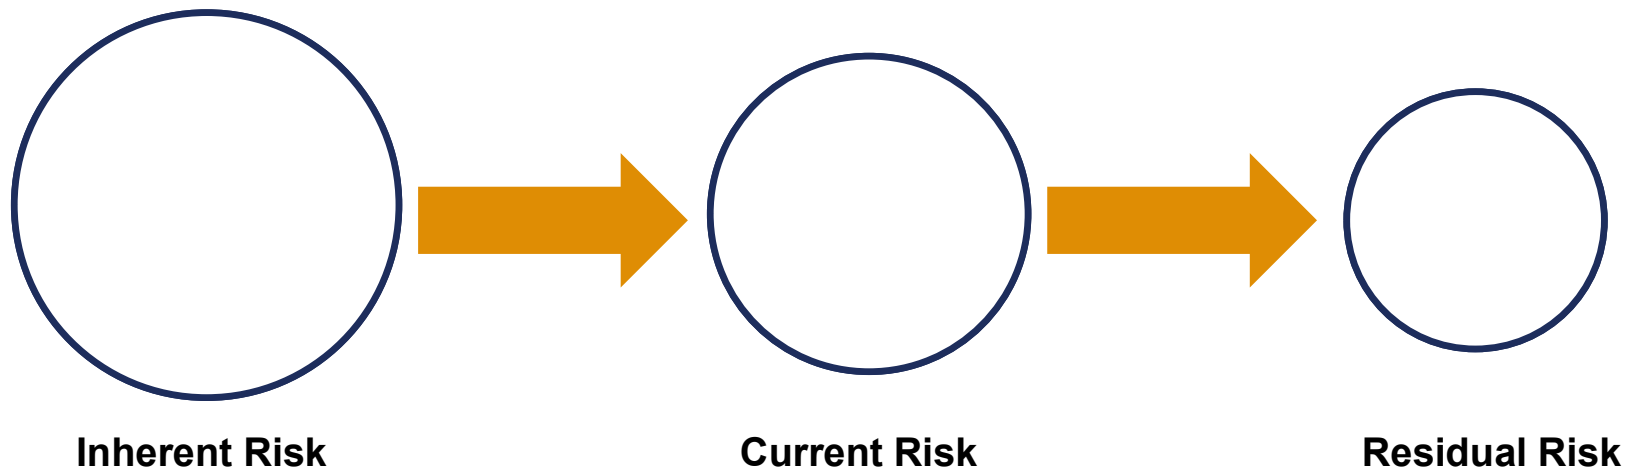

A medium-sized logistics and shipping enterprise plans to sunset an aging, internally developed customer database and implement a cloud-based customer relationship management (CRM) application to replace it.

Identify an inherent, current and residual risk that would apply to this situation. Use the provided worksheet to record your answers. Be prepared to share and discuss with the group.
